CAREER OBJECTIVE

Motivated B.Tech Information Technology student with strong knowledge of Java, Python, HTML, CSS, JavaScript, SQL and web development concepts. Familiar with React.js, REST APIs, database management, and Data Structures & Algorithms. Hands-on experience through academic projects, internships and technical workshops. A quick learner with strong problem-solving skills and a passion for developing scalable full-stack applications, seeking a Full Stack Developer role to apply technical skills and grow in a professional software development environment.

EDUCATION

Bachelor of Technology in Information Technology
Hindustan College of Engineering and Technology (2022 – Apr 2026) | CGPA: 7.5

TECHNICAL SKILLS

Languages: Python, Java, JavaScript

Frontend: HTML, CSS

Databases: MySQL, SQL

Tools: VS Code, GitHub, PyCharm

Core Concepts: Software Programming, Software Design, Data Structures & Algorithms

CERTIFICATIONS

- Python Program – CSC Computer Education
- Java Program – CSC Computer Education
- Business and Data Analytics – YBI Foundation

INTERNSHIP & EXPERIENCE

Business & Data Analytics – YBI Foundation (Mar 2025 – Apr 2025)

- Analyzed complex datasets using statistical methods, executing optimized SQL queries and data-manipulation scripts in Python.
- Collaborated with cross-functional team members to gather technical requirements and design clear, data-driven visual reports.
- Participated in peer reviews to verify code accuracy, efficiency and data consistency.

IoT & Embedded Systems Workshop – Zeekers Technology (Apr 2025)

- Gained practical exposure to microcontroller programming (Arduino/NodeMCU) and sensor interfacing using Embedded C.
- Applied cloud-based data transmission frameworks to real-world software applications, driving the development of the Fall Alert project.

PROJECTS

AI-Based Deep Fake Analysis for Multiple Sectors

- Architected a multi-modal web platform using Python and Flask to analyze and verify the authenticity of text, image and video content within a single integrated pipeline.
- Combined a transformer-based RoBERTa model with GPT-2 Perplexity scoring to evaluate semantic structure and detect AI-generated text.
- Deployed a SigLIP Vision Transformer to isolate hidden visual artifacts, facial inconsistencies and texture anomalies in manipulated imagery.
- Integrated OpenCV to build an automated video framework that extracts sequential frames, processes them through the visual engine and aggregates results into a final probability score.

Technologies: Python, Flask, HTML, JavaScript, OpenCV, RoBERTa, SigLIP

IoT-Based Fall Alert Device – Lead Developer

- Designed, tested and deployed a hardware-software system using motion sensors and accelerometers to detect human falls in real time.
- Integrated cloud transmission architecture to automatically dispatch emergency alert notifications to designated contacts.
- Applied problem-solving and debugging skills to optimize sensor responsiveness and resolve system communication issues.

Technologies: Python, Microcontrollers & Hardware, Fall Sensors

SOFT SKILLS

Adaptability & Flexibility, Collaborative Teamwork, Analytical Problem-Solving, Strong Logical Reasoning

ADDITIONAL

Languages: Tamil, English

DECLARATION

I hereby declare that the above information is true to the best of my knowledge, and I look forward to your positive response and the opportunity to contribute my skills to your organization.
